Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-7 and 26 drawn to secure usage of digital content, classified in class 705 subclass 51.
 - II. Claims 8-25 are drawn to licensing digital content , classified in class 705 subclass 59.

Inventions I and II are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because invention I does not require a “hosting a web page and generating a license key” as in invention II.

Examiner notes that is would be a burden to search multiple inventions given their separate status in the art as noted above.

The requirement is deemed proper and therefore made FINAL.

Via paper filed on March 24, 2008 a provisional election was made without traverse to prosecute the of Invention I, claims 1-7 and 26. Affirmation of this election must be made by

applicant in replying to this Office action. Claims 48-55 are withdrawn from further consideration by the examiner, 37 CFR 1.142(b), as being drawn to a non-elected invention.

Claims 1-9 have been examined

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-9 are rejected under 35 U.S.C. 103(a) as being obvious over Mori et al (US Patent 7,107,454) in view of Official Notice.

As per claim 1,

Mori discloses a method for automatically verifying a signature during a retail payment transaction, the method comprising:

obtaining an electronic signature of a cardholder;

using an electronic signature verification process to automatically verify the electronic signature;(Abstract)

Official Notice is taken that "requiring a point-of-sale (POS) operator to manually verify the electronic signature when an exception occurs during the electronic signature verification process." is common and well known in prior art in reference to transaction protocols. It would

have been obvious to one having ordinary skill in the art at the time the invention was made to manually check a digital signature in order to prevent fraud by exposing fake ID's.

As per claim 2,

Mori discloses the method of claim 1, wherein using an electronic signature verification process to automatically verify the electronic signature further comprises:
responsive to an account of the cardholder having a corresponding digital signature on file,
comparing the electronic signature to a the corresponding digital signature stored in the signature database under an the account of the cardholder using a signature verification algorithm(Figure 5, 16)

As per claim 3,

Mori discloses the method of claim 1, wherein using an electronic signature verification process to automatically verify the electronic signature comprises:
searching the a signature database by account number to determine if an account of the cardholder has a corresponding digital signature on file. (Figure 5)

Claims 4-9 are not patentably distinct from claims 1-3 and are rejected for at least the same reasons.
